CLAW SHOE RANGE: INSPIRED BY THE COVERGUARD® BEAR

Designed for optimum comfort and inspired by the bear's paw, all CLAW shoes have real cushioning, like the pads of a bear's paw, and optimised grip on unstable ground, similar to claws.

In collaboration with a team of experts, the three CLAW shoes have been designed to meet the needs of workers and tested in real-life conditions.

- **Wide fit:** avoids foot compression and makes it easier to put on
- **Padded inner lining:** prevents chafing and protects sensitive feet
- **Insole:** absorbs shock and wicks away perspiration

The experts' opinion

“

Fabien DUMAS

Designer & consultant

Inspired by the COVERGUARD® bear, the CLAW line translates from a stylistic and functional point of view the brand's DNA. It is its footprint, its signature.

” “

Marie MANIN

Podiatrist

In a stabilometric examination, we find that CLAW shoes do not disturb the posture of normo-axed patients.

” “

Andréa COMEROT

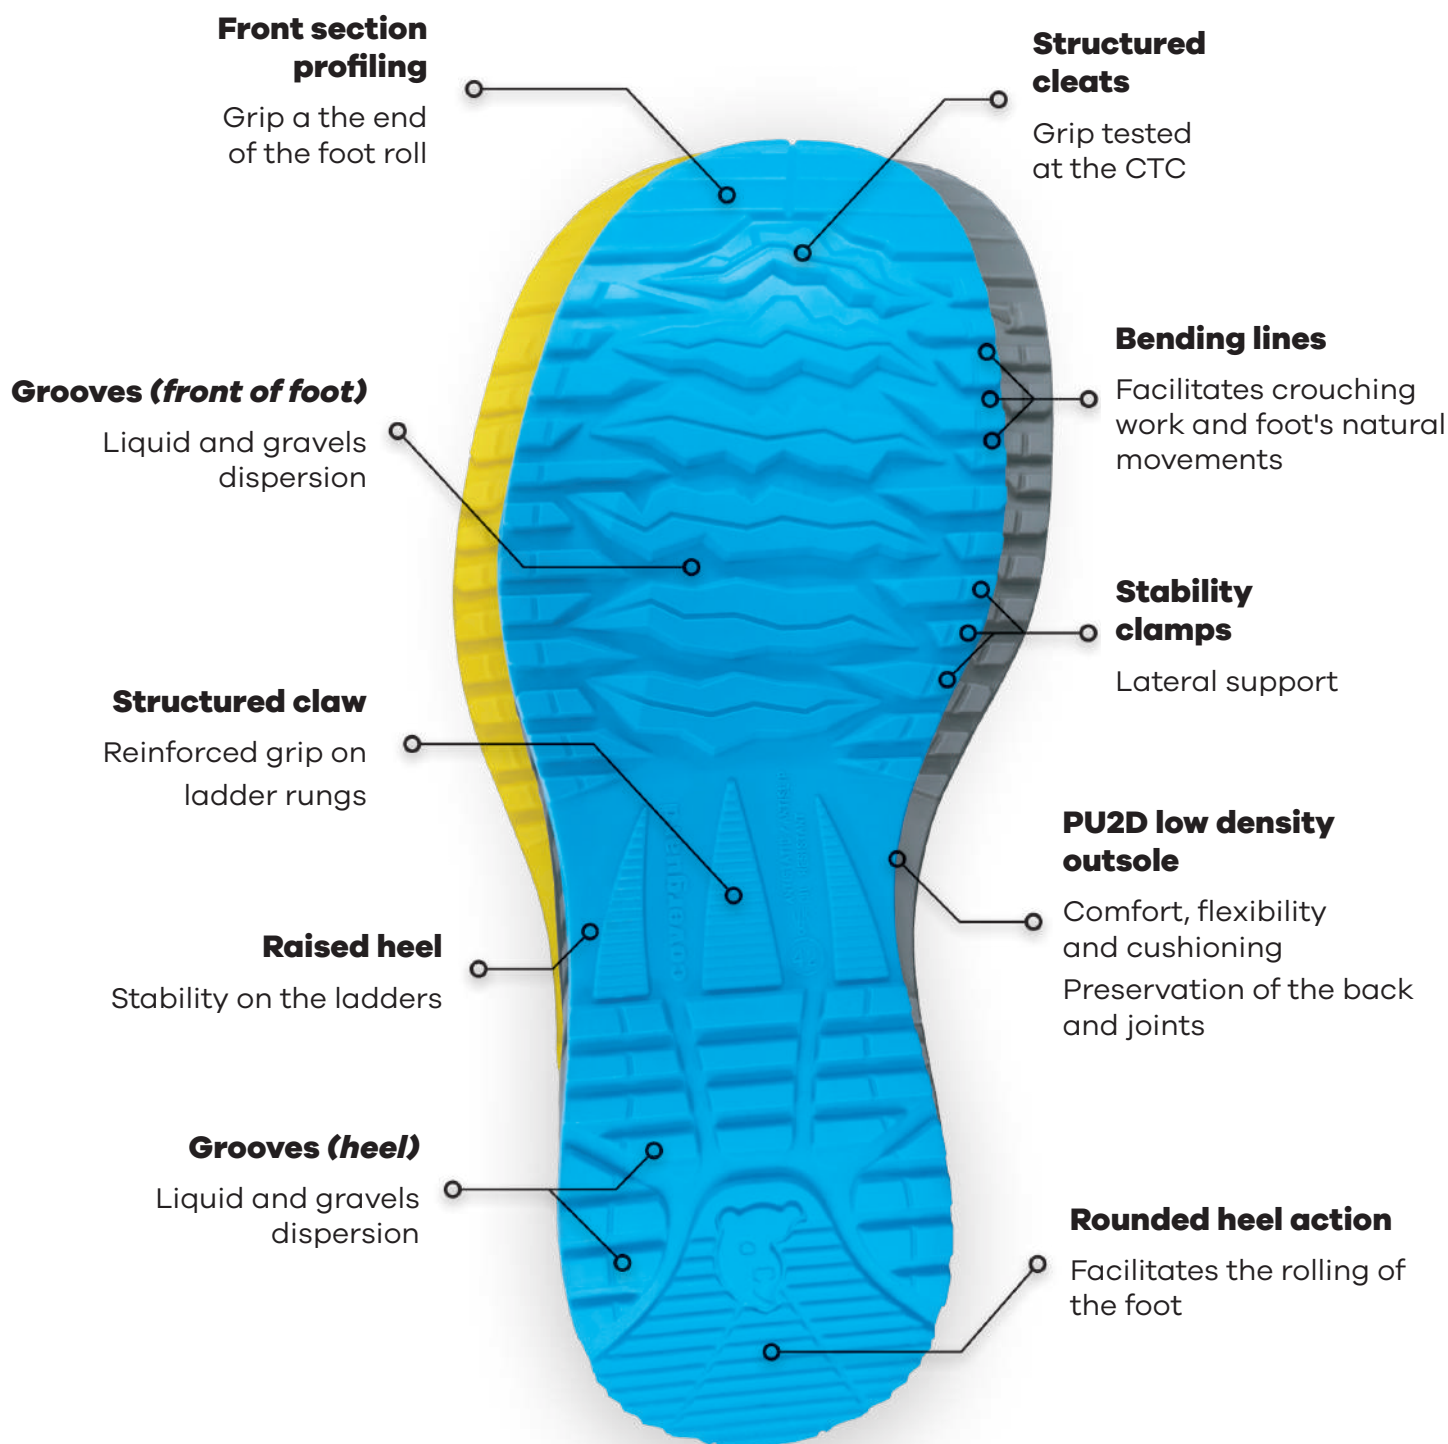

Landscape designer

CLAW RESIST is a trainer resistant, yet light and comfortable. It protects against the rain, and in the summer it is also a very good alternative to leather shoes.

”

A MULTIPURPOSE OUTSOLE DESIGNED AND DEVELOPED IN FRANCE

- + Absorbs shocks and ground deformation
- + Goes with the foot on all terrains

PROTECTION SYSTEM

- + Aluminium toe cap
- + Composite puncture resistance sole

Over 25%
of the impact force
is absorbed
by the sole
